Recommended Protective Face Mask Guidance (Revised 7/23/2021)

See the university's health behavior guidance for the most current information on who should wear a mask and when.

RECOMMENDED Face Masks Information on Recommended Face Masks Fit snugly but comfortably against the side of the face Be secured with ties or ear loops Include multiple layers of fabric (three is ideal, with an absorbent innermost layer made of cotton and a moisture-wicking outer layer made of polyester) Cloth Mask A white innermost layer is recommended to detect moisture easily (replace if moisture is identified) Allow for breathing without restriction Can be laundered and should be washed before reuse Knot the ear loops where they attach to the mask's edges and then tuck in and flatten the extra material close to the face **Disposable** Contain droplets but do not make a tight seal on the face **Surgical Mask** Available in different thicknesses with different ability to protect; if worn alone, choose a higher quality mask such as an ASTM level 2 or 3 Intended for one-time use, must be disposed of after use Wearing an N95/KN95 may be considered in certain circumstances related to the working/learning environment and inherent health **N95 or KN95** risks of the individual: see below for more information While effective at offering a high level of protection if properly fitted, these types of respirator Respirator Masks masks are discouraged as they divert critical resources away from health care workers Need medical clearance for proper fitting NOT PERMITTED Face Masks Information on Not Permitted Face Masks **Neck Gaiter.** Limited ability to contain droplets Bandana. If worn, layering fabric can provide increased protection Scarf, T-shirt Should be washed before reuse or Towel Masks with valves should not be used as it can expel exhaled air Mask with Valve into the environment, increasing the risk for others Not approved unless worn together with an approved face mask **Face Shield**

Lack of evidence of efficacy in containing droplets

Individuals at High Risk

Everyone is at risk for getting COVID-19 if they are exposed to the virus; however, some people are more likely than others to become severely ill. For more information about conditions that increase risk for COVID-19, see the <u>CDC</u>.

UT community members at increased risk who engage in low-risk activities such as walking around campus and sitting in classrooms where social distancing can be maintained except for brief periods are encouraged to double mask or wear face masks with increased protective ability, such as a KN95 mask with medical clearance and proper fitting.

Individuals in High Exposure Environments

UT community members in higher risk environments are expected to use face coverings with increased protective ability. In general, cloth face masks are not appropriate substitutes for surgical masks or respirators in workplaces where the latter are recommended and available. See the university's health behavior guidance for more information.
